HPMS SCORECARD

ILLINOIS

2016

Generated: June 12, 2017

The HPMS Scorecard is a product of the Office of Highway Policy Information and was developed by FHWA's Data Visualization Center. The Scorecard is a visually oriented statistical review of the HPMS data for any one of the 52 reporting geographies (50 states plus Washington DC and Puerto Rico). The primary purpose of this Scorecard is to provide a consistent and thorough tool for review of the HPMS Data Items (also known as 'Section' or attribute data).

The Scorecard is intended to serve as a visual tool to highlight areas of concern or data irregularities, but is not an exhaustive error finding tool. The Scorecard reflects data from 1) the 'Analysis Year' which is typically the most recent data year and 2) a previous 'Comparison Year', which is required to accommodate many of the Scorecard's temporal calculations. The Scorecard also evaluates the National patterns for the year prior to the Analysis Year. Elements of the Scorecard are 1) statewide data timeliness, quality and completeness summary, 2) information on the interpretation of scorecard elements, 3) pavement and travel items detailed reviews, 4) ramp data details and 5) HPMS Data Item statistical review.

DVC

Data Visualization Center

Score

The Score is the sum of points received from timeliness, completeness, and quality.

Data Summary

	2016	2015
Number of Data Items	74.00	74.00
Number of Routes	8,856.00	8,669.00
Pct. Unmatched Routes	7.69	5.70
Number of Sections	14,001.00	13,551.00
Pct. Unmatched Sections	5.67	5.70
Total Center Line Miles*	33,610.41	34,831.93
Total Lane Miles*	70,427.49	63,421.52

*Does not include non-NHS locals.

Key to data item status and completeness: Submitted and Complete Submitted and Incomplete Not Submitted

Key to data item quality: High Medium Low

AADT SECTION SUMMARIES IN TRAFFIC DETAIL

This crossbar plot is similar to a box and whisker plot, but replaces the 'whiskers' with a minimum and maximum dot. The "box" component of this chart illustrates the 25th, 50th, and 75th percentiles.

DISTRIBUTIONS FOR ALL OTHER ITEMS

Numeric Data Items, like AADT, or Items with more than seven (7) categories are displayed using a density plot. They are smoothed versions of histograms, where the density of values is displayed continuously over the value range.

Extreme values have been excluded from these plots for easier reading. To help, the Scorecard reports minima and maxima in the Data Item's Summary Table above these plots.

DISTRIBUTIONS FOR CATEGORICAL ITEMS

These bar charts are used when the Data Item has seven (7) or fewer categories. If there are more categories, the Scorecard uses a density plot.

The plots always display labels from 1-7 even if the Data Item has fewer categories. This is done to maintain a consistent layout, facilitating easier reviewing for the user.

YEAR OVER YEAR CHANGES FOR NUMERICAL ITEMS

Histograms using unequal intervals summarize how section-level values have changed from the comparison year to the analysis year. In this case, 'no change' is shown with the central bar labeled "0%". Instances with "No match" are summarized to the far right and any actual value increases or decreases are binned by the magnitude of change. In all cases, the bar height represents the percentage of total centerline miles.

YEAR OVER YEAR CHANGES FOR CATEGORICAL ITEMS

This stacked horizontal bar chart illustrates the share of miles where the Data Item value stayed the same, changed in some way, or was not matched with the requested comparison year. The Scorecard also prints the actual percentages below in the corresponding bar colors. Note the ★ next to one of the percentages, explained below.

• An asterisk indicates where FHWA expects a low percentage. If an asterisk appears next to a high percentage, further investigation might be warranted.

Analysis of Through Lanes
and Surface Type
(Counts of sections)
